ExxDRT Read Operation Mode Setting: _ExxDRT202_ReadOperationMode

Basic	Reads the operation mode of a Digital Type Sensor in the DeviceNet network.						
function							
Symbol	Start Trigger		_ExxDRT202_ReadO				
			(BOOL)	(BOOL)

	CX-Programmer	Version 5.0 c	or higher				
Conditions	Sensor	•					
for usage	If a Mobile Consol	e is connected	when the power is	turned ON, the	e function cannot be used because		
_			blished with the Sen				
	 The Sensor must 	be in RUN mo	de. The function car	nnot be used w	when the Sensor is in another mode,		
	i.e., SET mode.						
	CPU Unit Settings						
	PLC Setup: Shared			tructions in FB	S		
	DeviceNet Response Timeout Time (default: 2 s)						
		A Timeout time of 10 s or higher is recommended.					
	Number of retries (default: 0) Shared Resources						
	Communications ports (internal logical ports)						
	• Communications p Other	ons (internal i	iogical polits)				
	Communications r	must be within	one network and ca	annot cross to	another network		
Function					etwork with the specified Master Unit		
description	number, Slave node a						
FB	• The FB is processed over multiple cycles. The FB_BUSY output variable can be used to check whether						
precautions	the FB is being processed.						
	• FB_OK or FB_NG will be turned ON for one cycle only after processing is completed. Use these flags to						
	detect the end of F	B processing					
	Timing Chart						
	Start Trigger	ON OFF					
	FB Busy Flag (FB_BU	SY) ON OFF					
			_ 				
	FB Normal End (FB_	OK) or ON					
	FB Error End (FB_NG)						
				_			
					nal End Flag goes ON when the e value has been read and stored.		
				•			
EN input		t between an u	ipwardly differentiat	ea condition fo	or the start trigger and the FB_BUSY		
condition Restrictions	output from the FB.	wordly differen	tiated condition for				
Input	Always use an upwardly differentiated condition for EN. If the input variables are out of range, the ENO Eleg will turn OEE and the EP will not be processed						
variables		• If the input variables are out of range, the ENO Flag will turn OFF and the FB will not be processed.					
Output	This FB requires n	nultiple cycles	to process. Always	connect an OF	R including the FB_BUSY output		
variables					d to completion (see <i>Symbol</i>).		
	 Do not turn the FB_BUSY output variable ON or OFF outside the FB. 						

Variable Tables

Name	Variable name	Data type	Default	Range	Description
EN	EN	BOOL			1 (ON): FB started 0 (OFF): FB not started.
Master Unit No.	MasterUnitNo	INT	&0	&0 to &15 #0 to #F	Specify the unit number of the DeviceNet Unit.
Slave node address	NodeNo	INT	&0	&0 to &63	Specify the node address of the slave.
Sensor Amplifier unit number	SensorUnitNo	INT	&1	&1 to &13 or &1 to &16	Depending on the communication mode setting, the maximum number of connectable Units is either 13 or 16 Units. Specify a unit number within the allowed range. Refer to the <i>Related Manuals</i> for details.

Output Variables

Name	Variable name	Data type	Range	Description
ENO (May be omitted.)	ENO	BOOL		1 (ON): FB processed normally. 0 (OFF): FB not processed or ended in an error.
FB Busy Flag	FB_BUSY	BOOL		Automatically turns OFF when processing is completed.
FB Normal End	FB_OK	BOOL		Turns ON for one cycle when processing ends normally.
FB Error End	FB_NG	BOOL		Turns ON for one cycle when processing ends in an error.
Operating mode	OperationMode	UINT	&0 to &1	Outputs the operation mode. With the E3X and E3C, &0 indicates L/ON and &1 indicates D/ON. With the E2C, &0 indicates NO and &1 indicates NC.

Internal Variables

Internal variables are not output from the FB.

If the FB_NG Flag turns ON, the following internal variables can be monitored to obtain information on the error.

Name	Variable name	Data type	Range	Description
FINS error code	FINS_ErrorCode	WORD		The FINS error code is output. A code of #0000 is output for a normal end. Refer to the <i>Related Manuals</i> for details on the error codes.
Explicit message error code	Explicit_ErrorCode	WORD		Outputs the explicit message error code. A code of #0000 is output for a normal end. Refer to the <i>Related Manuals</i> for details on the error codes.

Explicit Error Code Details

Code	Contents	Meaning
#0000	Normal end	
#16FF	No Sensor Amplifier	There is no Sensor Amplifier with the specified unit number.
#0CFF	Not executable	The specified command cannot be executed.
		A Mobile Console is connected.
		 There is an error in communications with the Sensor Amplifier.
		• The Sensor Amplifier is in an operation mode other than RUN mode.
		• The FB was executed for a Sensor Amplifier that is not supported.

Note

This manual is a reference that explains the function block functions.

It does not explain the operational limitations of Units, components, or combinations of Units and components. Always read and understand the Operation Manuals for the system's Units and other components before using them.
