| <b>Function description</b>         | When the Start Trigger turns ON, the Smart Sensor connected to the Serial Port specified by the <i>Connection unit</i> and <i>Serial port No.</i> is checked to see if it is enabled.  |              |          |          |  |                                    |  |               |                       |
| <b>FB precautions</b>               | <ul style="list-style-type: none"> <li>This FB is processed over multiple cycles. The BUSY output variable can be used to check whether the FB is being processed.</li> <li>OK or NG will be turned ON only for one cycle after processing is completed. Use these flags to detect the end of the FB processing.</li> </ul> <p><b>Time Chart</b></p> <ul style="list-style-type: none"> <li>When this FB is started, the output parameters are cleared. See the output parameters when the OK flag turns ON.</li> </ul>  |              |          |          |  |                                    |  |               |                       |
| <b>EN input condition</b>           | Connect EN to an OR between an upwardly differentiated condition for the start trigger and the BUSY output from the FB.  |              |          |          |  |                                    |  |               |                       |
| <b>Restrictions Input variables</b> | <ul style="list-style-type: none"> <li>Always use an upwardly differentiated condition for EN.</li> <li>If the input variables are out of range, the ENO Flag will turn OFF and the FB will not be processed.</li> </ul>   |              |          |          |  |                                    |  |               |                       |
| <b>Output variables</b>             | <ul style="list-style-type: none"> <li>This FB requires multiple cycles to process. Always connect an OR including the BUSY output variable to the EN input variable to ensure that the FB is processed to completion (see <i>Symbol</i>).</li> <li>Do not turn the BUSY output variable ON or OFF outside the FB.</li> </ul>  |              |          |          |  |                                    |  |               |                       |
| <b>Other</b>                        | <ul style="list-style-type: none"> <li>Up to 3 seconds may be required for this FB to be completed (i.e., from EN turning ON until the OK or NG Flag turns ON).</li> </ul>   |              |          |          |  |                                    |  |               |                       |

■ Variable Tables

Input Variables

| Name            | Variable name | Data type | Default | Range     | Description  |
|-----------------|---------------|-----------|---------|-----------|--|
| EN              | EN            | BOOL      |         |           | 1 (ON): FB started.<br>0 (OFF): FB not started.  |
| Unit selection  | UnitSelect    | INT       | &0      | At right. | Specify the Unit and the serial port.<br>Only serial port 2 of CP1H/CP1L M-type CPU unit is possible to use this FB.<br>■ Connected to CPU Unit<br>Unit selection #FFFF<br>Serial port No. Not accessed.<br>(CP1H/CP1L-M: Serial Port2<br>CP1L-L14/20: Serial Port1)<br>■ Connected to Serial Communication Board(SCB)<br>Unit selection #BBBB<br>Serial port No. &1: Serial Port 1<br>&2: Serial Port 2<br>■ Connected to Serial Communication Unit(SCU)<br>Unit selection SCU Unit No. (&0 to &15)<br>Serial port No. &1: Serial Port 1<br>&2: Serial Port 2 |
| Serial Port No. | PortNo        | INT       | &1      | &1 to &2  |  |

Output Variables

| Name                     | Variable name | Data type | Range | Description   |
|--------------------------|---------------|-----------|-------|---|
| ENO<br>(May be omitted.) | ENO           | BOOL      |       | 1 (ON): FB processed normally.<br>0 (OFF): FB not processed or ended in an error. |
| Busy Flag                | BUSY          | BOOL      |       | Automatically turns OFF when processing is completed.                             |
| Normal end               | OK            | BOOL      |       | Turns ON for one cycle when processing ends normally.                             |
| Error end                | NG            | BOOL      |       | Turns ON for one cycle when processing ends in an error.                          |
| Enable status            | Enable        | BOOL      |       | Outputs the enable status.<br>1 (ON): Enable lit<br>0 (OFF): Enable not lit       |

Internal Variables

Internal variables are not output from the FB.

If the NG Flag from the FB turns ON, the following internal variables can be monitored to obtain information on the error.

| Name       | Variable name | Data type | Range | Description  |
|------------|---------------|-----------|-------|--|
| Error code | ErrorCode     | WORD      |       | The results information from the Smart Sensor is output to the Error Code.<br>See below. |

Error Code Details

| Code  | Contents        | Meaning  |
|-------|-----------------|--|
| #0000 | Normal end      |  |
| #2203 | Operation error | <ul style="list-style-type: none"> <li>The value displayed on the main digital display is read when an error has occurred, e.g., an incident level error.</li> </ul> |
| #2204 | Operation error | <ul style="list-style-type: none"> <li>The Sensor is not in RUN mode.</li> </ul>   |

Version History

| Version | Date    | Contents            |
|---------|---------|---------------------|
| 1.00    | 2004.6. | Original production |

Note

This manual is a reference that explains the function block functions.

It does not explain the operational limitations of Units, components, or combinations of Units and components. Always read and understand the Operation Manuals for the system's Units and other components before using them.
