Teach 2-point High Thresholds: _ZXLN010_Teach2HighThreshold

Basic	Uses two points to teach the high threshold.				
function					
Symbol					
	Start Trigger _ZXLN010_Teach2HighThreshold I ↑ ↓ (BOOL)				
	ÈN ÈNÓ				
	Busy Flag Unit Selection (INT) (BOOL) UnitSelect BUSY Busy Flag				
	Serial Port No (INT) (BOOL) Normal End				
	(INT) (BOOL)				
	Sensor CH No SensorChNo NG Error End				
File name	Lib\FBL\omronlib\LaserSensor\ZXLN_ZXLN010_Teach2HighThreshold10.cxf				
Applicable	Smart Sensor ZX-LDA-N				
models					
	CPU Unit CS1*-CPU**H Unit version 3.0 or higher CJ1*-CPU**H Unit version 3.0 or higher				
	CJ1M-CPU ^{**} Unit version 3.0 or higher				
	CP1H				
	CP1L (except 10 points CPU)				
	Serial CS1W-SCU21-V1, CJ1W-SCU21-V1, CJ1W-SCU41-V1 Unit Version 1.2 or higher				
	Communications CS1W-SCB21-V1 and CS1W-SCB41-V1 Unit Version 1.2 or higher Units/Boards				
	CX-Programmer Version 5.0 or higher				
Conditions	External Connections				
for usage	 Can be used for 1:N connections in the controller configuration of the sensor side. 				
	•Communications must be within one network and cannot cross to another network.				
	Communication Settings				
	The communication settings of the serial port (Serial Gateway) must be the same as those of the Smart Sensor.				
	•The communications settings of the specified serial port can be set to the default Smart Sensor settings				
	(the factory shipment value) using the Set Communications Port (_ZXL600_SetComm) function block,				
	and the other Smart Sensor settings using the Set Serial Gateway Mode (_SCx604_SetPortGATEWAY)				
	function block.				
	CPU Unit Settings PC System Setup: Shared Settings for Communications Instructions in FBs.				
	•Communications Instruction Response Timeout Time (default: 2 s), 5 s or more is recommended.				
	 Communications instruction Response Timeout Time (default. 2 s), 5 s of more is recommended. Number of retries (default: 0) 				
	Shared Resources				
	Communications ports (Internal logical ports)				
Function	When the Start Trigger turns ON, the high threshold is taught using 2 points for the Smart Sensor connected				
description	to the Serial Port specified by the <i>Connection unit</i> , <i>Serial port No</i> and <i>Sensor CH No.</i> . This FB sets the intermediate value between the current value of the main digital display and the current low				
	threshold value as the low threshold.				
	An execution error will occur if the display value is not being held or if the low threshold is higher than the				
	high threshold.				
FB	•This FB is processed over multiple cycles. The BUSY output variable can be used to check whether the				
precautions	FB is being processed.OK or NG will be turned ON only for one cycle after processing is completed. Use these flags to detect				
	•OK of NG will be turned ON only for one cycle after processing is completed. Use these hags to detect the end of the FB processing.				
	Time Chart				
	Start Trigger ON OFF				
	Busy Flag ON OFF				
	Normal End (OK) or ON				
	Error End (NG) OFF				
	fB execution completed.				
EN input	Connect EN to an OR between an upwardly differentiated condition for the Start Trigger and the BUSY output				
condition	from the FB as above.				
Restrictions	•Always use an upwardly differentiated condition for EN.				
Input variables	• If the input variables are out of range, the ENO Flag will turn OFF and the FB will not be processed.				
Output	•This FB requires multiple cycles to process. Always connect an OR including the BUSY output variable to				
variables	the EN input variable to ensure that the FB is processed to a completion (see Symbol).				
	Do not turn the BUSY output variable ON or OFF outside the FB				

Variable Tables Input Variables

Input variables					
Name	Variable name	Data type	Default	Range	Description
EN	EN	BOOL			1 (ON): FB started.
					0 (OFF): FB not started.
Unit selection	UnitSelect	INT	&0	As right	Specify the Unit and the serial port.
Serial Port No.	PortNo	INT	&1	&1 to &2	Only serial port 2 of CP1H/CP1L M-type
					CPU unit is possible to use this FB.
					Connected to CPU Unit
l					Unit selection #FFFF
					Serial port No. Not accessed. (CP1H/CP1L-M: Serial Port2
					CP1L-L14/20: Serial Port1)
					Connected to Serial Communication Board(SCB)
					Unit selection #BBBB
					Serial port No. &1: Serial Port 1
					&2: Serial Port 2
					Connected to Serial Communication Unit(SCU)
					Unit selection SCU Unit No. (&0 to &15)
					Serial port No. &1: Serial Port 1
					&2: Serial Port 2
Sensor CH No.	SensorChNo	INT	&1	&1 to &5	Specify the CH No. of the connecting
					sensor.
					e.g.: &2 in the case of CH2.

Output Variables

Name	Variable name	Data type	Range	Description
ENO	ENO	BOOL		1 (ON): FB processed normally.
(May be omitted.)				0 (OFF): FB not processed or ended in an error.
Busy Flag	BUSY	BOOL		Automatically turns OFF when processing is completed.
Normal end	OK	BOOL		Turns ON for one cycle when processing ends normally.
Error end	NG	BOOL		Turns ON for one cycle when processing ends in an error.

Internal Variables

Internal variables are not output from the FB.

If the NG Flag from the FB turns ON, the following internal variables can be monitored to obtain information on the error.

Name	Variable name	Data type	Range	Description
Error code	ErrorCode	WORD		The results information from the Smart Sensor is
				output to the Error Code.

Error Code Details

Code	Contents	Meaning
#0000	Normal end	
#2203	Operation error	The setting is incorrect. Refer to the <i>ZX</i> Series Smart Sensor Operation Manual for the setting error conditions of teaching or the zero reset function.
#2204	Operation error	The sensor's operation mode is not in the RUN mode.

Version History

Version	Date	Contents	
1.00	2005.12.	Original production	

Note

This manual is a reference that explains the function block functions.

It does not explain the operational limitations of Units, components, or combinations of Units and components. Always read and understand the Operation Manuals for the system's Units and other components before using them.
