Teach 2-point Low Threshold: _ZXLN011_Teach2LowThreshold

Basic function	Uses two points to teach	h the low threshold.				
Symbol	Se					
File name		Sensor\ZXLN_ZXLN011_Teach2LowThreshold10.cxf				
Applicable models	Smart Sensor	ZX-LDA-N				
	CPU Unit	CS1*-CPU**H Unit version 3.0 or higher CJ1*-CPU**H Unit version 3.0 or higher CJ1M-CPU** Unit version 3.0 or higher CP1H CP1L (except 10 points CPU)				
	Serial Communications Units/Boards	CS1W-SCU21-V1, CJ1W-SCU21-V1, CJ1W-SCU41-V1 Unit Version 1.2 or higher CS1W-SCB21-V1 and CS1W-SCB41-V1 Unit Version 1.2 or higher				
	CX-Programmer	Version 5.0 or higher				
Conditions for usage	 External Connections Can be used for 1:N connections in the controller configuration of the sensor side. Communications must be within one network and cannot cross to another network. Communication Settings 					
	The communication settings of the serial port (Serial Gateway) must be the same as those of the Smart Sensor. •The communications settings of the specified serial port can be set to the default Smart Sensor settings (the factory shipment value) using the Set Communications Port (_ZXL600_SetComm) function block, and the other Smart Sensor settings using the Set Serial Gateway Mode (_SCx604_SetPortGATEWAY) function block. ■CPU Unit Settings PC System Setup: Shared Settings for Communications Instructions in FBs. •Communications Instruction Response Timeout Time (default: 2 s), 5 s or more is recommended. •Number of retries (default: 0) ■Shared Resources					
Function	Communications ports (Internal logical ports) When the Start Trigger turns ON, the low threshold is taught using 2 points for the Smart Sensor connected					
description	to the Serial Port specified by the <i>Connection unit</i> , <i>Serial port No</i> and <i>Sensor CH No</i> . This FB sets the intermediate value between the current value of the main digital display and the current low threshold value as the low threshold. An execution error will occur if the display value is not being held or if the low threshold is higher than the high threshold.					
FB precautions	This FB is processed over multiple cycles. The BUSY output variable can be used to check whether the FB is being processed. OK or NG will be turned ON only for one cycle after processing is completed. Use these flags to detect the end of the FB processing. Time Chart Start Trigger ON OFF Busy Flag ON OFF Normal End (OK) or ON					
	Error End (NG)	OFF FB execution completed.				
EN input condition	Connect EN to an OR be from the FB as above.	etween an upwardly differentiated condition for the Start Trigger and the BUSY output				
Restrictions Input variables	•Always use an upwa	ardly differentiated condition for EN. s are out of range, the ENO Flag will turn OFF and the FB will not be processed.				
Output variables	the EN input variable	Itiple cycles to process. Always connect an OR including the BUSY output variable to e to ensure that the FB is processed to a completion (see <i>Symbol</i>). SY output variable ON or OFF outside the FB.				

■ Variable Tables

Input Variables

Name	Variable name	Data type	Default	Range	Description
EN	EN	BOOL			1 (ON): FB started. 0 (OFF): FB not started.
11.4	11.00	15.17	0.0		
Unit selection	UnitSelect	INT	&0	As right	Specify the Unit and the serial port.
Serial Port No.	PortNo	INT	&1	&1 to &2	Only serial port 2 of CP1H/CP1L M-type
					CPU unit is possible to use this FB.
					■ Connected to CPU Unit
					Unit selection #FFFF
					Serial port No. Not accessed.
					(CP1H/CP1L-M: Serial Port2
					CP1L-L14/20: Serial Port1)
					■ Connected to Serial Communication Board(SCB) Unit selection #BBBB
					Serial port No. &1: Serial Port 1
					&2: Serial Port 2
					■ Connected to Serial Communication Unit(SCU)
					Unit selection SCU Unit No. (&0 to &15)
					Serial port No. &1: Serial Port 1
					&2: Serial Port 2
Sensor CH No.	SensorChNo	INT	&1	&1 to &5	Specify the CH No. of the connecting
					sensor.
					e.g.: &2 in the case of CH2.

Output Variables

Output Variables				
Name	Variable name	Data type	Range	Description
ENO	ENO	BOOL		1 (ON): FB processed normally.
(May be omitted.)				0 (OFF): FB not processed or ended in an error.
Busy Flag	BUSY	BOOL		Automatically turns OFF when processing is completed.
Normal end	OK	BOOL		Turns ON for one cycle when processing ends normally.
Error end	NG	BOOL		Turns ON for one cycle when processing ends in an error.

Internal Variables

Internal variables are not output from the FB.

If the NG Flag from the FB turns ON, the following internal variables can be monitored to obtain information on the error.

If the 140 1 lag from the 1 B tarns C14, the following internal variables can be monitored to obtain information on the error.				
Name	Variable name	Data type	Range	Description
Error code	ErrorCode	WORD		The results information from the Smart Sensor is
				output to the Error Code.

Error Code Details

Code	Contents	Meaning
#0000	Normal end	
#2203	Operation error	The setting is incorrect. Refer to the <i>ZX Series Smart Sensor Operation Manual</i> for the setting error conditions of teaching or the zero reset function.
#2204	Operation error	The sensor's operation mode is not in the RUN mode.

Version History

Version	Date	Contents	
1.00	2005.12.	Original production	

Note

This manual is a reference that explains the function block functions.

It does not explain the operational limitations of Units, components, or combinations of Units and components. Always read and understand the Operation Manuals for the system's Units and other components before using them.
